Can I resize photos in MacJournal?

MacJournal has image resizing built-in.

There are two ways to accomplish this:

-Right-click on an image/photo and select from Scale to Window Width, 25%, 50%, 75% options.

The second way to resize an image in MacJournal is thus:

-Select the photo/image by clicking on it.

-A resize handle appears in the lower right-hand corner.

-Drag the resize handle diagonally up and to the left to make the photo arbitrarily smaller.
