Does Paperless support multiple currencies?

Jim Henson - 2015-03-24 - in Paperless for Mac OS

Does Paperless support multiple currencies?

Absolutely! By default, Paperless uses your system currency when you enter amounts that don't have a currency symbol. For instance, in the US, if you enter 5.00, it becomes \$5.00. In order to enter other currencies, you enter the currency symbol along with the value. So, if you are in the US and want to enter currencies in Canadian dollars, you would enter the value as Can\$5.00.

The currency symbol you enter will vary based on your current system settings. In order to determine what currency symbol to enter, please download our [CurrencyTest](#) application and look in the left column for the ISO code corresponding to the currency symbol you want to enter and then use the symbol in the right hand column.

You may be asking why the currency symbol differs depending on what your system settings are. In order to validate that the currency symbol is correct, we use certain information from the operating system. After a few entries, entering multiple currencies is quite easy. If you have questions, please don't hesitate to contact us.
