How can I export the speech output directly to iTunes?

With Narrator you can export audio presentations either [as .AAC files](#) or directly to iTunes.

There are two ways to export a presentation directly to iTunes:

1. From the **File** menu, select **Export to iTunes...**
2. In the **Toolbar**, click the **Export to iTunes** button.

At this point, the presentation will be exported from Narrator and will show up in iTunes. Narrator handles opening the file in iTunes automatically--there is no need to locate the file in the Finder or open in iTunes.

Note that each chapter will appear as its own track in iTunes.
