How do I get Paperless to not save an additional file from my ScanSnap?
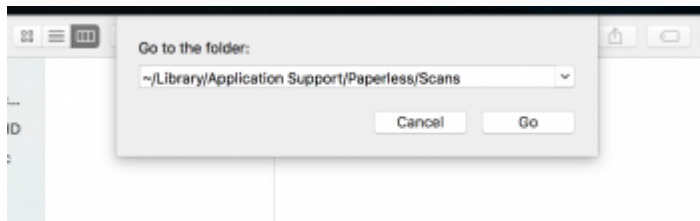

Corey Johnson - 2018-12-17 - Paperless for Mac OS

Your save location in the ScanSnap Manager or ScanSnap Home Paperless profile must have inadvertently been set to another location. To rest the save location follow the step below:

The Library directory is a hidden directory. Not sure how your Paperless ScanSnap Profile got set to a different location but let me see how to get Paperless to get ScanSnap Profile to reset it....

From The ScanSnap Settings > go to that file save location and click "Browse..."

Now when the window appears for navigation, press command shift g
a small "Go to the folder:" dropdown should appear.

type or copy and paste this:
~/Library/Application Support/Paperless/Scans

Click Go

Click "Choose"

Back in the scanSnap profile window, click "Apply"

You should be all set.
