I'm having trouble pasting Russian fonts into a new scene.

When using a non-English keyboard, at times it is also necessary to use non-English fonts. By default, the Templates in Montage use English fonts in all the Elements. If typing into Montage is working as you require, but copying and pasting text, into a new scene for instance, seems to get messed up, you have likely not changed the default fonts in the Elements.

To do this, go to the Format menu > Edit Elements. Then select each of the items in the sidebar, and change the default font for the item. You will need to change the font for each item in the sidebar.

To make it simpler for future new scripts, it might be wise to save a modified Template as a custom template for your language so that you can get writing sooner for the next script.
