Paperless takes more than one attempt to select "Save PDF to Paperless" from any print dialog's PDF menu to get Paperless to properly import the receipt.

Jim Henson - 2019-02-20 - in OCR

Paperless takes more than one attempt to select "Save PDF to Paperless" from any print dialog's PDF menu to get Paperless to properly import the receipt.

Creating a new PDF Services alias of Paperless should resolve the issue.

1. Go to ~/Library/PDF Services/
2. Trash the existing PDF Services aliases fro Paperless.
3. Open a new finder window.
4. Navigate to your applications folder.
5. Make an alias of Paperless (CMD-L) (you can also make aliases to specific libraries if you wish).
6. Place the alias of Paperless (or a library's Alias) into the ~/Library/PDF Services/ folder.

For new users, Paperless creates this PDF Services item automatically. If you manually delete the item Paperless doesn't recreate it. It will re-create this item if it does not already exist and your preferences have been deleted.
