What's new in Paperless 2.1.2?

Here is what's new in Paperless 2.1.2:

Fixes

- Resolved an issue where field autocompletion would override attempts by the user to correct matched autocomplete text.
- Changed autocomplete to strict case- and accent-sensitivity, to address user feedback. In order to for autocomplete to match entered text, the entered text must now match in capitalization and character accent.
- Resolved an issue where dragging any more than two files to Paperless from Finder concurrently resulted in only two library items importing to Paperless.
- Resolved an issue where OCR results were intermittently not posted to the OCR Text window.
- Resolved an issue where instructing Paperless to undo after deleting a library file resulted in an exception.
- Resolved an issue where pasting text into a tag field that already contained tags resulted in an exception.
- Set the resolution for the default ScanSnap Manager profile to Best, to improve OCR results.
- Removed the option "Dragging files from Finder into Library window deletes originals after importing" from Paperless preferences under 10.7.

Additional Changes

- Increased the size of the pulldown menu (the list of autocomplete values) that are displayed for a text field to display ten matches.
