What's New in Paperless 2.2.1?

Here is what's new in Paperless 2.2.1:

Fixes
Resolved a number of issues with auto-complete (for fields including Merchant/Title, Category, Subcategory):

- Fixed a bug where Paperless would suggest seemingly random auto-complete values that would not match the typed characters.

- Changed autocomplete so that it is no longer case-sensitive (e.g. "moe's tavern" = "Moe's Tavern").

- Fixed a number of issues relating to case-insensitive auto-complete, where case changes were sometimes hard to override (e.g. Paperless would display "TAco Bell" instead of "Taco Bell").

- Fixed issues with auto-completion of values that started with or contained accented characters.

- Included workarounds for 2 OS errors that contributed to auto-complete misbehavior.

Additional Changes

- Added a number of auto-corrections to OCR for commonly mis-recognized words. (e.g."GALLUNS" is auto-corrected to "GALLONS" and "1lSA" is corrected as "VISA").
