What's new in Paperless for Windows 2.2?

Here's what's new in Paperless for Windows 2.2:

Added Features

- Added support to import library items from scanners with Windows Image Acquisition (WIA)
- Added the option to send email over an encrypted (SSL/ TSL) SMTP connection
- Added the option to add message text when emailing a library item
- Added functionality to import email recipients (to the email library item dialog) from contacts in Microsoft Outlook 2007 (or later)
- Added functionality to import email recipients (to the email library item dialog) from Contacts-type library items within the current Paperless library
- Added functionality to import email recipients (to the email library item dialog) from tab-delimited value files
- Added support for customizable currency designators
- Added support for customizable decimal separators

Resolved Issues

- Resolved an issue where information entered into the Splits field would disappear after the user either clicked Apply or deselected the current library item

Other

- Re-implemented the default document type selector. This preference is now located under the Data Types tab in Library Configuration.
