Which scanners work well with Paperless 3?

We highly recommend the Fujitsu ScanSnap scanners. In fact, we offer them for sale on our web site as an endorsement of the tight integration and great quality they provide.

Paperless works with any Image Capture compliant scanner that has Mac OS X drivers. This includes scanners made by Brother (though there are recent issues with Mojave and Brother scanners), EPSON, HP, Lexmark, as well as scanners made by other vendors. Verify that you have the latest scanner drivers for your scanner. Check the manufacturer's website. Follow the instructions that came with the scanner in order to install the drivers.

Here is how to setup your scanner in Paperless:

1. Choose Preferences... from the Paperless menu
2. Click on the Scanner button.
3. Click on the radio button that matches your scanner's interface (ScanSnap, Image Capture).
4. Close the preferences and click the Scan button to perform a scan.
