Why do I get an error when trying to enter or change the information in MacGourmet Deluxe?

Jim Henson - 2017-03-02 - in MacGourmet Deluxe 4

Why do I get an error when trying to enter or change the information in MacGourmet Deluxe?

On rare occasions the database gets locked by the file system, and doesn't unlock normally. Try this:

1. **Quit** MacGourmet Deluxe
2. [Locate your MacGourmet4Database file](#) (usually in Documents) and choose **File > Get Info**.
3. In the window that is displayed, look at **Sharing & Permissions**, and ensure that the value given for **You can** is **Read & Write**.
4. If it already does, then with the MacGourmet4Database file still selected, right-click, or control-click on the file and choose **Show Package Contents** which will open a window. Now, select the **MacGourmet.mgdb** file and choose **Get Info**, and make sure **You can** says **Read & Write** for that, as well.
