Why do I have to run the MacGourmet Deluxe application off the disk all the time?

It sounds like you may not have installed MacGourmet Deluxe into your applications folder properly...

1. Put the CD in your Mac's disk drive, double click the Mariner Product CD icon on your desktop.
2. Locate the MacGourmet Deluxe folder and double click it. A new window will appear containing the MGD icon and an alias (or shortcut) to the Applications folder.
3. Click and drag the MGD icon and drop it onto the Application folder icon (within this window) to copy the application to your Applications folder.
4. Close the window, and head to your applications folder to launch MacGourmet Deluxe.

After the app has copied to your App's folder, you can eject the Mariner Product CD.

*It should be noted that Mariner no longer sells product in CD form on our web site. Amazon and some other retailers do.
